

Scale-Up Plan

- Slides submitted **by 1 Oct**, pdf format
- Optional - use selected slides as a supplementary asset for showcase

PROBLEM YOU TACKLED

- What problem are you solving, how big is it, who's the target user, who else is involved
- Why did you pick this problem
- What did you learn about the problem through this entire process?
- What do you still want to learn about this problem?

PROTOTYPE YOU BUILT & TESTED

- Describe your concept - what it would be like as a real-world solution, how it works
- Describe your prototype - what you actually managed to build, how it represents the concept
- How you tested it, with whom, where
- Findings and insights from the prototyping and testing process
- Impact - waste diverted using the prototype

REFLECTIONS

- What you learned through this journey - could be about sustainability, innovation, your specific problem, etc
- What was the biggest challenge and how did you handle it?
- Skills your team built, developed or improved

SCALING UP

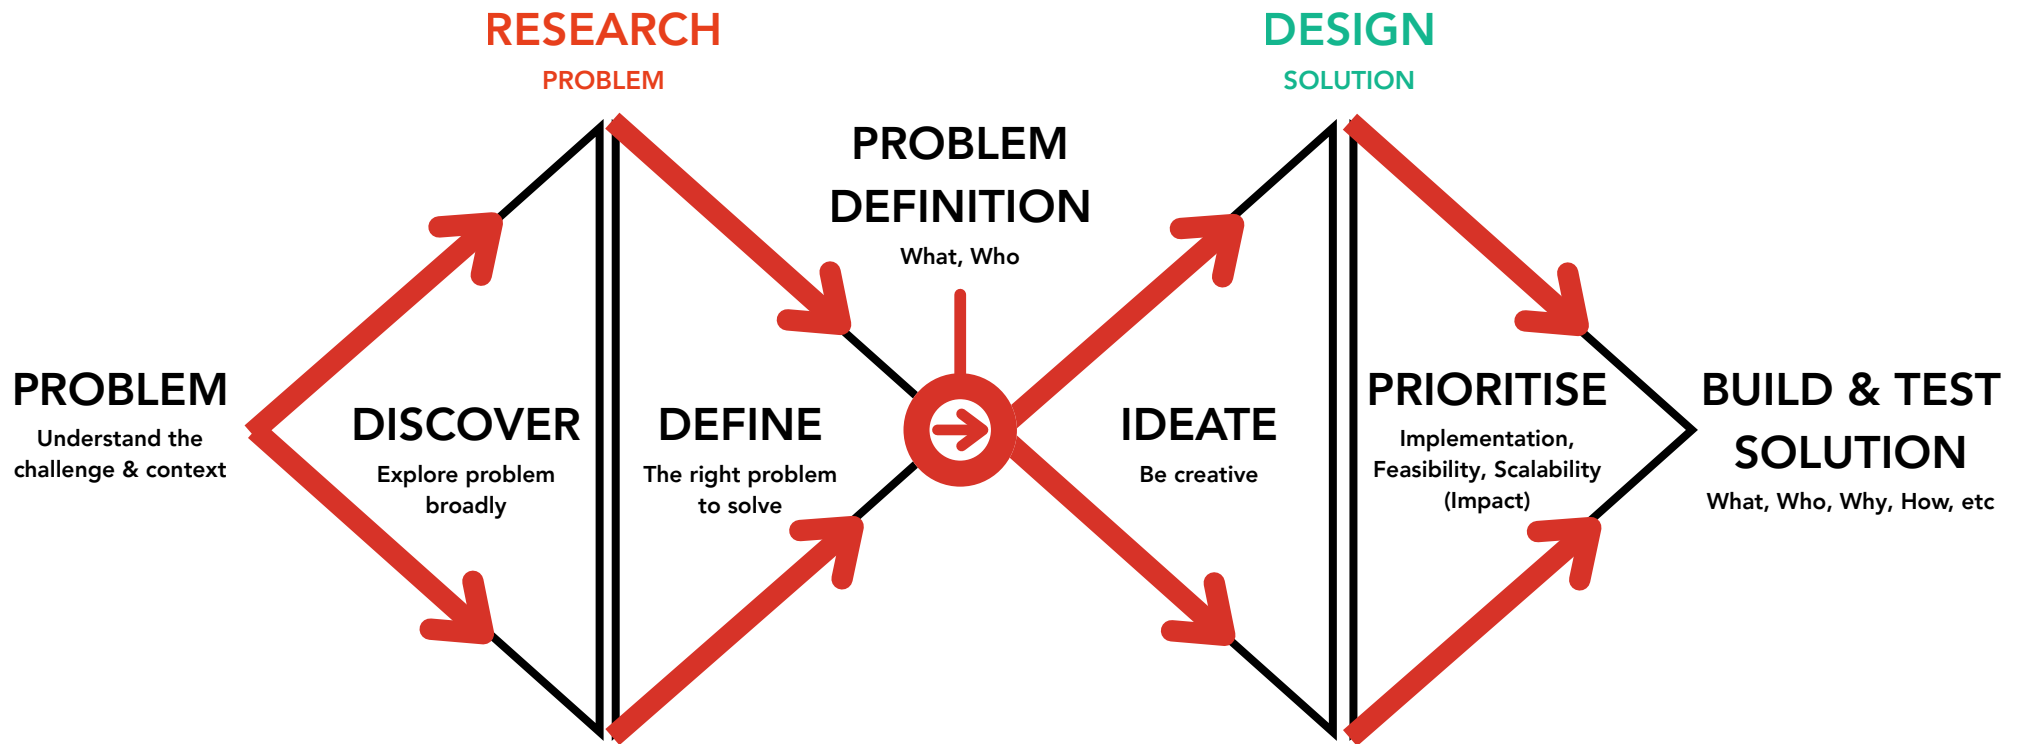

- If you were to continue this project, what would you do - refine, pivot, etc
- Include:
 - Execution plan
 - Timeline for next 6 months
 - Stakeholders involved - how you would bring them in
 - Budget breakdown

Potential for committed teams to get post-programme support for further development & deployment

Tips

- **Photos** of the design, build and test process (prototype, your team, mentor, interviews, site visits, test users, etc) - add captions
- Illustrations
- Acknowledgements - mentors, industry partners
- **Use of AI:**
 - Bias against obvious AI output
 - Should not replace actual user interactions
 - You should be able to explain what is submitted

Innovation Process - Double Diamond

Obstacles

Journey Map

	Stage 1: Planning	Stage 2: Cooking	Stage 3: Eating	Stage 4: Storing	Stage 5: Disposal
User Action	Clears expired food, builds a grocery list.	Preps meals, tosses peels and scraps into the trash.	Serves dinner, monitors plate waste.	Packs leftovers, puts containers into the fridge.	Lugs heavy, smelly garbage to the chute outside.
Emotion	😞 Guilty	😐 Productive	😞 Resentful	😞 Exhausted	😭 Defeated
Core Friction	Deep shelves hide items until they rot.	High volume of organic scrap fills bins fast.	Family picks at food or rejects leftovers.	Leftovers are forgotten and rot anyway.	Leaky, smelly bags ruin floors & clothes during transit.

Tip

Focus on identifying the various stages of the journey correctly based on your understanding of the user

SCAMPER

- Substitute
- Combine
- Adapt
- Modify (Magnify or Shrink)
- Put to another use
- Eliminate
- Reverse or Rearrange

Decision Matrix

	Idea 1	Idea 2	Idea 3
Problem <i>Are we solving the problem we validated?</i>			
Impact <i>If it works, how many kilograms does it keep out of the stream?</i>			
Feasibility <i>Can my team build, deploy, and test it in the weeks remaining?</i>			
Desirability <i>Will people actually use it, repeatedly, on a bad day?</i>			
Originality <i>Does this add something that is not already on the shelf?</i>			

Define It

Hello, I am (name)
from (team).

We provide (product
or service) for
(customer) to help
them (the problem
you solve).

We are the best
company to do this
because (your USP/
Secret Sauce) and we
are (your call to
action).

Define your Concept

What it would be like as a real-world
solution, how it works

Define your Prototype

What you will build between now and the showcase
that allows users to see the value in your idea?

How will it represent the concept?

The purpose of the prototype is to

communicate the value of your solution

+

test whether it address your problem statement

+

get feedback from user

It sets the direction for pivot & refinement.
